ABSTRACT

Information on U.S. degrees awarded nationwide and in the South in 1980-1981 and data on degree completions and fields of study for black students are presented, based on results of the Higher Education General Information Survey (HEGIS). Data are provided on the number of degrees awarded in 1980-1981 in the major HEGIS fields, at each level of degree, by race, for public and private institutions in the United States, the Southern Regional Education Board region (SREB), and each of the 14 SREB states. Tables show data for first professional and associate degrees in a similar format. A narrative description of trends is included. Highlights include the following: the number of students receiving degrees in higher education is increasing at a higher pace in the South than in the rest of the country, at both the baccalaureate and master's levels; there have been significant increases over the last 10 years in the number of degrees students are earning in the fields they perceive as offering the best job opportunities, specifically business and management and the health professions; and the number of black students receiving degrees reflects uneven progress of blacks in higher education, with only slight increases at the associate, baccalaureate, and doctoral levels, and a decline at the master's level. FOREWORD

Today's college students are very concerned about employment prospects after college. They want "good" jobs and financial security, and they have been choosing college programs accordingly. This career orientation permeates much of the data presented in this edition of the SREB series on degrees awarded. The idealism of college students in the late 1960s has become the pragmatism of the 1980s, and the mix and number of degrees awarded largely reflect these changes.

Shifts in values and career interests have created problems at some colleges and universities. Many business and engineering schools are overcrowded and need more faculty. Not all institutions can provide enough technological support for all of the students and faculty who need computers. Too few students complete advanced study in engineering and computer science, preferring instead to take relatively high paying jobs in industry and government. This increases the shortage of faculty in these fields, with possible long-term detrimental effects on training, research, and development. The shortage of mathematics and science teachers in the public schools parallels the situation in higher education; this shortage threatens to limit the number of college-bound students who are ready for college-level work. If higher education cannot contribute some viable solutions to these problems, the highly trained manpower needed for the "information society" may not materialize.

The number of degrees awarded to black students reflects somewhat uneven progress of blacks in higher education. Between 1975-76 and 1980-81, the number of associate, bachelor's, and doctoral degrees received by blacks increased slightly; the number of master's degrees declined; and the number of first professional degrees showed some growth, especially in the SREB states. Continued improvement in the preparation of high school students is essential if the educational advances of minorities are to be sustained, particularly in the new technological fields.

Department of Labor statistics show that two out of three employed college graduates are in managerial or professional specialties. Only 3.5 percent of the workers who have completed four years or more of college are unemployed. In these times of shifting public attitudes, such findings affirm the value of higher education to individuals and to society.

TABLE 3: Associate Degrees and Other Formal Awards of Less Than 4 Years, By Field, Length of Curriculum, and Race; U. S., SREB Region, and SREB States; 1980-81 61

Degrees Awarded in the Nation and the South, 1980-81 describes the degrees awarded in the 1980-81 academic year and discusses trends and patterns in the number of degrees awarded in the aggregate United States and the South. Degree completions and fields of study for black students are also reviewed. The National Center for Education Statistics (NCES) conducts the Higher Education General Information Survey (HEGIS), which is the source of the data.

Tables 1, 2, and 3 were produced from computer tapes provided by NCES. Table 1 shows the number of degrees awarded in 1980-81 in the major HEGIS fields, at each level of degree, by race, for public and private institutions in the United States, the SREB region, and each of the 14 SREB states. Tables 2 and 3 show data for first professional and associate degrees, respectively, in a similar format.

TRENDS IN DEGREES AWARDED

College students tend to be more career-oriented today than they were a decade ago. Since a college degree in any field is no longer enough to guarantee a good job and prosperity, more students are attempting to choose college programs that they perceive as offering the most promising prospects for employment after graduation. On most campuses, the career ambitions of students have had a definite impact on the mix and number of degrees that are awarded.

Some view the demand for career preparation in college as a reflection of current prevalence of materialistic values among college students. Financial security has become one of the most important goals of students. In 1982, 69 percent of college freshmen participating in a national survey indicated that "being very well off financially" was essential or very important to them--a significant rise over the 41 percent who expressed similar values in 1972. In contrast, "developing a meaningful philosophy of life" was essential or very important to 47 percent of the 1982 college freshmen, a drop from 71 percent in 1972.

College graduates do face intense competition for jobs today. While only a relatively small proportion (about 3 percent) of the labor force with four years or more of college are unemployed, many employed college graduates may be underemployed in their current jobs. Most college students want challenging work and a commensurate salary after graduation, but there is a surplus of college graduates who are seeking managerial and professional level jobs in the labor force.

An unprecedented number of the World War II "baby boom" generation went to college, expanding the supply of educated people in the work force. In addition, many women have rejected traditional female roles and have postponed motherhood, adding to the number of participants in the labor force. Boosted by demographic

and social forces, the supply of college-educated persons entering the labor market has grown steadily in the last decade (Table A and Figure 1).

The number of job openings requiring college preparation has not kept pace with growth in the supply of college graduates. Although some fields, such as electrical engineering, have had manpower shortages, others that acccount for large numbers of personnel, teaching for example, have had an excess of qualified persons. In addition, an unstable economy--with double-digit inflation, recession, and high interest rates--has held down hiring. Thus, career anxiety has accelerated and many college students are channeling their energies into fields of study perceived to facilitate entry into desirable jobs and careers.

In light of the economic conditions and employment prospects that prevailed in the 1970s, it is not surprising that the number of students graduating from colleges and universities in career-related degree programs increased significantly from 1970-71 to 1980-81. During this period the percentage of male degree recipients dropped in quite a few fields of study. The movement of women into traditionally male fields accounts for some of the shift. For example, 91 percent of bachelor's degrees in "Business and Management" awarded in 1970-71 went to men; in 1980-81, the corresponding figure was 63 percent. Likewise, in "Computer and Information Sciences" the percentage of bachelor's degrees awarded to men dropped from 86 in 1970-71 to 67 in 1980-81. At the same time, the number of women receiving bachelor's degrees in "Letters" was down by 46 percent from 1970-71 to 1980-81.

At the baccalaureate level, several fields produced more than twice as many graduates in 1980-81 as in 1970-71 (Table B), while the opposite occurred

in other fields. Although there are many opportunities for people with quantitative skills, the number of bachelor's degrees awarded in mathematics in the United States decreased by 13,700 over the 10-year period. At the same time, however, the number of bachelor's degrees awarded in computer and information sciences and in engineering grew by 12,800 and 25,000, respectively. Both fields--computer and information sciences and engineering--are based upon applied mathematics and are very strong in the job market.

The number of master's degrees awarded increased greatly from 1970-71 to 1980-81 in several fields, although some fields had fewer graduates (Table C). The number of first professional degrees increased much more rapidly than the number of doctoral degrees during the 1970-71 to 1980-81 period (Tables D and E). Several first professional fields produced more than twice as many graduates; very few doctoral fields had such growth. None of the first professional fields produced fewer graduates in 1980-81, while one-third of the fields with doctoral programs awarded fewer doctorates in that year.

At the associate degree level, the number of graduates in programs related to business and high technology occupations rose significantly from 1976-77 to 1980-81 (Table F). The number of associate degrees awarded in the "arts and sciences or general programs" declined somewhat during the same period.

Definite shifts by field occurred in the distribution of degrees awarded between 1970-71 and 1980-81 at the bachelor's, master's, and doctoral levels (Table G).

Table E

FIRST PROFESSIONAL DEGREES AWARDED BY FIELD, 1970-71 AND 1980-81, AND PERCENT CHANGE; UNITED STATES AND SREB STATES

At the baccalaureate level, six fields account for 64 percent of the degrees awarded in the nation in 1980-81. A closer look reveals significant variation in degree production among these six fields (Table H). Of the six fields, the four that show growth in the number of baccalaureate degrees awarded--business and management, engineering, health professions, and biological sciences--generally had more optimistic employment prospects for graduates than the other fields--education and social sciences.

At the master's degree level, 70 percent of the degrees awarded nationally in 1980-81 were in six fields (Table I). Master's programs that upgrade or update job-related skills and knowledge had the greatest growth. The number of master's degrees awarded in education increased slightly from 1970-71 to 1980-81 (salary increases for teachers are often tied to completion of graduate work). The job market for master's of business administration recipients was very strong in the mid-1970s, resulting in a large increase in degrees awarded. The expansion of state and local governments helped create a demand for master's graduates in public affairs and

services; similarly, the growth of medical services paralleled degree production in the health professions. Engineering, on the other hand, had a relatively small increase in graduates at the master's level. The job market has been very favorable for baccalaureate recipients, and advanced degrees prove to be very costly for engineers, in terms of foregone income. The shrinking job market for social science graduates was reflected in falling degree production.

Six doctoral fields produced 71 percent of the doctorates awarded nationally in 1980-81. The number of doctorates awarded from 1970-71 to 1980-81 increased in education, biological sciences, and psychology, but decreased in social sciences, physical sciences, and engineering (Table J). It appears that enrollments in doctoral programs are affected by the number of people completing preliminary degrees and by perceptions of the "value added" of an advanced degree. For example, in social sciences, there has been a decline in the number of bachelor's and master's degrees awarded; in education, advanced degrees are needed for promotion and for higher salaries. Overall, economic incentives and the supply and demand of qualified people appear to affect the number of students pursuing doctoral degrees.

Law, medicine, and dentistry accounted for 80 percent of the first professional degrees awarded in the nation in 1980-81. The number of degrees awarded in these three fields increased significantly from 1970-71 to 1980-81 (Table K), with a substantial increase in the number of women receiving degrees in these professions. For instance, over 90 percent of the law and medicine recipients in 1970-71 were male, whereas in 1980-81, one-third of the law degrees and one-fourth of the medicine degrees were awarded to females. Many of the people enrolled in first professional programs are attracted by the income-earning potential of practitioners.

Mississippi	429	320.6	145	85.9	30	---
North Carolina	685	117.5	414	93.5	60	9.1
South Carolina	224	44.5	188	147.4	55	161.9
Tennessee	508	71.0	396	26.1	170	9.0
Texas	1,967	87.7	896	148.2	384	104.3
Virginia	1,135	151.1	379	87.6	104	38.7
West Virginia	126	72.6	103	56.1	59	31.1

NOTE: These are the three fields producing the most first professional degrees nationally in 1980-81.

In the three fields awarding the largest number of associate degrees, the technical fields showed significant increases in the number of degrees awarded from 1976-77 to 1980-81, while the arts and sciences or general programs awarded fewer degrees in the later year (Table L).

Table L

West Virginia	351	3.5	681	45.2	658	163.2

NOTE: These are the three fields producing the most associate degrees nationally in 1980-81.

DEGREES AWARDED BY RACE

Black students received 6.7 percent of all degrees awarded nationally and 11.1 percent of all degrees awarded in the SREB states in 1980-81 (Table M). About 44 percent of the degrees received by black students in the United States were granted by colleges and universities in the South.

Table M

DEGREES AWARDED TO BLACK STUDENTS, 1980-81, BY LEVEL;
UNITED STATES AND SREB STATES

	United States		SREB States		
	Degrees Awarded	Percent of All Degrees	Degrees Awarded	Percent of All Degrees	South as a Percent of U.S.
Associate*	38,461	8.6%	15,516	12.9%	40.3%
Bachelor's	60,729	6.4	29,879	11.6	49.2
Master's	17,152	5.8	6,960	9.2	40.6
Doctoral	1,265	3.8	356	4.8	28.1
First Professional	2,931	4.1	859	4.5	29.3
Totals	120,538	6.7%	53,570	11.1%	44.4%

*Associate degrees and other formal awards involving curricula of at least 2 years but less than 4 years.

Data on degrees awarded by race were not collected until 1975-76 (1976-77 for associate degrees). From that year until 1980-81, the number of degrees awarded to blacks increased slightly at the associate, bachelor's, doctoral, and first professional levels, but decreased at the master's level--16 percent nationally and 22 percent in the South (Table N).

Enrollment data indicate that more black students were majoring in science and technology fields in 1980 than in 1976. The increases in the number of bachelor's degrees awarded to black students in engineering and computer science reflect such gains (Table O). At the baccalaureate level, the fields of business and management, communications, health professions, and public affairs had significant increases in degrees awarded to black students. Education and social sciences accounted for almost half of the bachelor's degrees awarded to black students in 1975-76 but for less than one-third in 1980-81, indicating a shift away from these fields. The distribution of black bachelor's degree recipients, compared to the white distribution, included greater proportions in the fields of business and management, education, psychology, public affairs, and social sciences at the baccalaureate level.

NOTE: Data on degrees awarded by race were not collected until 1975-76, so only five-year trends can be observed.

At the master's level, th[illegible]mber of degrees awarded to black students has been declining in education and social sciences and increasing in business and management, health professions, and public affairs (Table P). Black degree recipients, compared to whites, were distributed disproportionately in education and public affairs at the master's level. At the doctoral level, the predominance of the field of education--which accounted for over half of the doctorates awarded to black students in 1975-76--has moderated somewhat, as the fields of biological sciences, psychology, and public affairs have increased their share of degrees awarded (Table Q). Black doctoral degree recipients were distributed more heavily, compared to whites, in education, library science, and public affairs. The number of black degree recipients has been growing in several first professional fields, especially dentistry (Table R), but in very few professional fields does the number rise above four percent of the total. Awards of associate degrees to blacks increased most significantly in the technical fields in one- to two-year curriculums (Table S).

Predominantly black colleges and universities awarded fewer bachelor's and master's degrees in 1980-81 than in 1975-76 (Table T). These institutions continue to make a significant contribution to the graduate education of blacks, awarding 19 percent and 21 percent of the master's and first professional degrees, respectively, received by blacks nationally; and 38 percent and 40 percent of the master's and first professional degrees, respectively, received by blacks in the SREB states. Predominantly black colleges and universities accounted for 33 percent of the bachelor's degrees awarded to blacks nationally and 57 percent in the South in 1980-81--down from 40 percent and 69 percent, respectively, in 1975-76.

NOTE: 1976-77 was the first year that comparable associate degree data were available.

Table T

DEGREES AWARDED TO BLACK STUDENTS AT PREDOMINANTLY BLACK INSTITUTIONS, 1980-81; PERCENT CHANGE, 1975-76 TO 1980-81, AND PERCENT OF ALL BLACK DEGREE RECIPIENTS, UNITED STATES AND SREB STATES

	United States			SREB States		
	Degrees Awarded in 1980-81	Percent Change 1976 to 1981	Percent of All Black Degrees*	Degrees Awarded in 1980-81	Percent Change 1976 to 1981	Percent of All Black Degrees*
Bachelor's	19,799	-16.0%	32.6%	16,910	-14.8%	56.6%
Master's	3,310	-33.4	19.3	2,669	-37.4	38.3
Doctorate	69	38.0	5.5	24	-7.7	6.7
First Professional	622	13.3	21.2	345	2.4	40.2
Totals	23,800	-18.4%	19.7%	19,948	-18.5%	37.2%

* These figures indicate the proportion of degrees awarded to black students by predominantly black institutions. Predominantly black institutions are those with greater than 50 percent black enrollment based on total headcount enrollment, fall, 1978.

SUMMARY

Today's college students tend to be career-oriented, and are choosing fields which appear to provide financial security in an economy with intense competition for jobs. The "baby boom" and the women's movement have contributed to the bulging supply of college-educated job seekers. Concern about unemployment or underemployment have heightened the career anxiety of many college students, who have responded by selecting college programs that emphasize job-related skills and knowledge. These students, compared to students 10 years earlier, are particularly interested in a college experience that will improve their prospects for employment.

This career-orientation is evident in trends among fields of study. Career opportunities and job openings have had a significant effect on the number of graduates majoring in the various fields. At the bachelor's degree level, business,

health, and technology-related programs have had great gains. At the master's degree level, programs that upgrade career-related skills and knowledge have been growing rapidly. At the advanced degree level, a shift from doctoral to first professional programs has occurred. At the associate degree level, the number of graduates in the arts and sciences or general programs has declined somewhat, while the number of degrees awarded in the technical fields has steadily grown.

Black students have responded to the same career concerns. Business and management has become the most popular bachelor's level field of study among black students. Awards of master's and doctoral degrees to blacks are still dominated by the field of education, but the number of education degrees awarded is declining. Of the first professional fields, law continues to predominate among black degree recipients.
